

Shower Door Care & Maintenance

Liquid Accents glass coating is a true breakthrough in shower glass protection. Much like a “non-stick” coating on a pot or pan, our glass coating dramatically reduces the time and effort required to clean shower glass. While shower glass will still need to be cleaned from time to time, our Liquid Accents glass coating makes the job easier!

To maintain the Liquid Accents treated glass:

1. Simply spray cool water along the top edge of the glass with a shower head or pour water with a cup. Most soapy residue will run right off.
2. Periodic rubbing with a nylon mesh loofah will easily remove any buildup that has occurred.
3. If desired, dry the glass with a microfiber cloth. Microfiber cloth is preferred to a squeegee as it leaves no streaks; just a clean, spotless shine.

Without periodic cleaning, water spots will eventually appear and hard water conditions may build up requiring more frequent cleaning; however, these spots are easily removed with cool water and a nylon mesh loofah. For stubborn hard water build up, white vinegar may be used to wipe clean. Even if the surface has been neglected and significantly stained, the glass is still protected!

The use of caustic and abrasive cleansers or abrasive scouring pads can quickly breakdown the Liquid Accents glass coating resulting in a more difficult to clean the glass surface. Also, avoid all ammonia-based glass cleaners as these will also dissolve the glass protection.
